The "Price Distribution" graph shows where the main area of value occurs. Where two or more peaks are evident, we could be looking at more than one distinct base value, normally the result of older unrenovated house prices on the one hand and newly built house prices on the other. The sample used comprises the most recent free-market, residential sales to a maximum of 100 sales or the year 2000. All sale prices used are at today's indexed values.
